

Weekly Report (June 2, 2025 - June 8, 2025)

1. Summary of Work

This week's efforts focused on three core activities:

1. Evaluating our method against EvoPlay
2. Refining the codebase
3. Completing the written deliverables (final report and poster).

2 Detailed Work

1. Evaluation of Our Method vs. EvoPlay

- Ran benchmark experiments on the designated test set, measuring fitness scores and structural similarity.
- Compiled quantitative results into comparative tables.
- Identified key strengths of our approach (improved average fitness by 0.06).

2. Code Cleaning

- Refactored core modules for modularity: separated data-loading, model-inference, and evaluation routines into independent scripts.
- Implemented consistent naming conventions.

3. Final Report & Poster Construction

- Drafted all sections of the final report: Introduction, Related Work, Methods, Results, and Discussion.
- Incorporated evaluation results and visualizations into the Results section.
- Designed the poster layout: selected color scheme, arranged figures (workflow diagram, performance graphs), and summarized key findings.
